**How to create a custom email address on your ENOM domain and connect it to your Gmail**

First, let's set up email forwarding for your new email address.
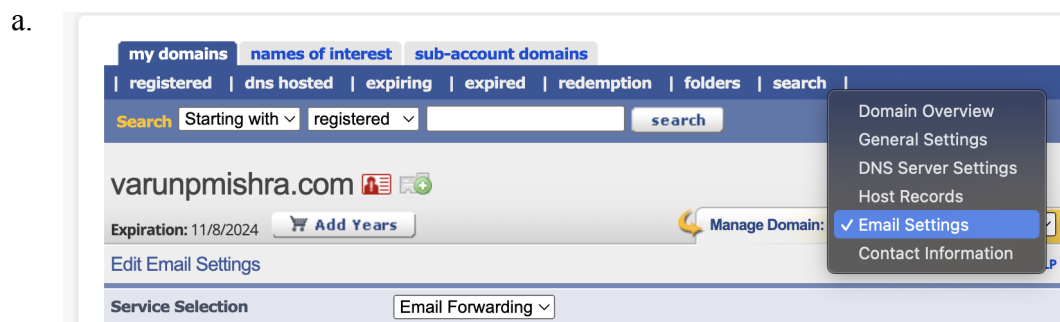

1. Log into ENOM
2. From the top navbar, select "Domains" > "My Domains"
   a.
3. Click the domain you want to add email address to from the table that shows up
   a.
4. Open the "Manage Domain" options on the right hand side, and select "Email Settings"
   a.

5. In the "Service Selection", select "Email Forwarding"

   a.

6. In a blank row, add in the email address host name. Add your personal Gmail in the "Forward To" column box. This will forward any emails to this email address to your inbox. Make sure it is Enabled.

   a.

7. Click the Save button on the bottom right!

Email Forwarding is set up. Now connect this email to your gmail account so you can send emails from this new address.

1. From the "Manage Domain" options on the right, now navigate to "Host Records". You should see a new TXT Record that was automatically populated when you created an email forwarding rule.

   a.

   The highlighted TXT record was automatically added by ENOM to the Host Records for this domain.

2. Now open a new tab and login to your Gmail account. This should be the same account you set the Email Forwarding to

3. Click your profile picture on the top right and click "Manage your Google Account"

   a.
4. On the left hand navigator, select "Security"
   a.

   Home

   Personal info

   Data & privacy

   Security

   People & sharing

   Payments & subscriptions

5. Scroll down to "How do you sign into Google?" and click "2-Step Verification". You might have to re-enter your Google Account password.
   a.

   How you sign in to Google

   Make sure you can always access your Google Account by keeping this information up to date

   | 🛡 2-Step Verification | ✅ On since Dec 14, 2021 | › |
6. Scroll all the way to the bottom to "App Passwords"
   a.

   App passwords

   App Passwords aren't recommended and are unnecessary in most cases. To help keep your account secure, use "Sign in with Google" to connect apps to your Google Account.

   | App passwords
2 passwords | › |
7. Create a new App Password. Type a name for the app password in the text input and click "Create".
   a.
   To create a new app specific password, type a name for it below...

   App name
   meet@varunpmishra

   Create

8. Copy the 16-character password that shows up and return to Gmail.

   a.

9. In Gmail, select the Settings icon on the top right, next to your profile picture, and then select "See all settings"

   a.

10. On the Settings navigation bar, select "Accounts and Import". In the "Send Mail as" section, select "Add another email".

   a.

11. In the yellow pop-up window, first input the email address you are adding. Hit "Next Step".

   a.

12. Add the following info in this next window:
    SMTP Server: smtp.gmail.com
    Port: 465
    Username: enter the Gmail account you are currently signed in as
    Password: the app password generated in step 8
    a.

    Send mail through your SMTP server

    Configure your mail to be sent through varunpmishra.com SMTP servers Learn more

   SMTP Server: smtp.gmail.com   Port: 465 ∨
    Username: **Your gmail account**
    Password: ••••••••••••••••••
    🔘 Secured connection using SSL **(recommended)**
    ⚪ Secured connection using TLS

    Cancel   « Back   **Add Account »**

13. Now you should receive a confirmation email from Gmail prompting you to confirm your email request. Click the link.
    a.
